Distance functions		Payment rules	
L_2	$L_2(\lambda, \lambda^I) = (\sum_I (\lambda_I^I - \lambda_I)^2)^{1/2}$	Threshold	$\max(0, \lambda_I^I - C), \quad C \geq 0$
L_∞	$L_\infty(\lambda, \lambda^I) = \max_I \lambda_I^I - \lambda_I $	Threshold	$\max(0, \lambda_I^I - C), \quad C \geq 0$
Relative error	$L_{RE}(\lambda, \lambda^I) = \sum_I (\lambda_I^I - \lambda_I) / \lambda_I^I$	Small	λ_I^I if $\lambda_I^I \leq C, \quad C \geq 0$
Product error	$L_\pi(\lambda, \lambda^I) = 1 / \lambda_I^I - \lambda_I $	Reverse	$\min(\lambda_I^I, C), \quad C \geq 0$
Squared relative error	$L_{RE2}(\lambda, \lambda^I) = \sum_I (\lambda_I^I - \lambda_I)^2 / \lambda_I^I$	Fractional	$\mu \lambda_I^I, \quad 0 \leq \mu \leq 1$
Weighted error	$L_{WE}(\lambda, \lambda^I) = \sum_I \lambda_I^I (\lambda_I^I - \lambda_I)$	Large	λ_I^I if $\lambda_I^I \geq C, \quad C \geq 0$
